FOR IMMEDIATE RELEASE

CLiC® On-Demand Privacy Glass by Cardinal Glass Industries now available in larger sizes, thinner thickness and lighter weight for even better performance and wider compatibility.

EDEN PRAIRIE, Minn., September 29, 2026 –Cardinal Glass Industries has introduced the next generation of its innovative CLiC On-Demand Privacy Glass with larger sizes and thinner panes requested by manufacturers.

Cardinal supplies the glass used in residential and commercial windows and doors across North America. End users may know the window or door brand, but Cardinal is often the glass behind it, trusted for quality, durability, and consistent performance. That same manufacturing foundation is behind CLiC.

CLiC uses an all new film-free PSCT technology to shift from clear to private in milliseconds. This innovative product technology solves and eliminates haziness and failure modes associated with older PDLC-based switchable privacy products. Unlike the unreliable privacy glass products of the past, CLiC is designed and built with durability and reliability first.

And now, customers can specify CLiC for panes up to 50 ft^2, with a maximum of 10.75 ft. in height and minimum of 7 inches in width. All orders are custom and can be configured to meet the manufacturer's requirements. CLiC engineering has also reduced the thickness of CLiC to 9.9mm across the full size range, rendering it thinner and lighter than ever before.

For exterior uses, CLiC is built into the insulating glass unit by replacing the inner pane of glass. A CLiC-powered insulating glass unit can range from 3/4 inch up to 2 inches overall, making CLiC insulating units compatible with standard residential exterior windows, doors and framing systems without requiring special modifications.

Beautifully built for everyday living, CLiC On-Demand Privacy Glass combines exceptional clarity, durable construction, and reliable performance homeowners can enjoy for years. The result is glass that switches in milliseconds, maintains transparency at every angle, and lasts the lifetime of your window.

"We are thrilled to enhance the design of CLiC to meet the needs of our customers and their end users," said Aaron Arntson, General Manager for CLiC at Cardinal. "The culture of continuous improvement is entrenched at CLiC and we will continue to listen to our customers' feedback, and design the best possible product to meet their needs."

CLiC technology is designed for residential windows, doors and partitions and combines privacy functionality with the performance characteristics expected from Cardinal insulating glass. CLiC is available through leading door, window and partition manufacturers across North America.

About Cardinal Glass Industries
Cardinal Glass Industries manufactures glass products for windows and doors, including float glass, coated glass, insulating glass, laminated glass and smart privacy glass. Through Cardinal FG, the company produces float glass used in glazing systems across North America. Cardinal LG's products include LoĒ™ energy-efficient coated glass. Cardinal IG has been producing industry leading insulating glass units for premier window manufacturers since 1962.

About CLiC
CLiC is available through leading door, window and partition manufacturers across North America. CLiC's patented design maintains crystal-clear optical quality over years of use, delivering a view that's indistinguishable from standard premium glass. And CLiC glass offers the same exceptional features of Cardinal Insulating glass units: Thermal & solar efficiency, excellent sound insulation, storm resistant durability - all backed by Cardinal's industry-leading warranty.
